

Vectron Journal Tool

Everything under control

ANALYSIS & EVALUATION

The Vectron Journal Tool is a tool for evaluation, archiving and analysis. It uses the journal data of the POS systems read out by the Vectron Commander.

DATA IMPORT & EXPORT

Data can be imported automatically or manually. The data prepared by the Journal Tool can then be exported and printed out for further applications.

RECORD OF ACTIVITIES

Shows which operator logged on or off when, which operator errors occurred and which programming was carried out.

Your benefits

- ▶ **Informative**
Detailed display of all sales transactions
- ▶ **Well-structured**
Easy and intuitive to operate
- ▶ **Clearly arranged**
Shows irregularities like double Z-count or a missing polling

Vectron Journal Tool

ANALYSIS TOOL

The software filters and analyzes the data taken over from the Vectron Commander. This provides you with detailed information on individual sales transactions. Polling periods and POS systems can be selected, e.g. single POS systems, POS systems of defined branch shops or of all branch shops.

FILTERING SALES TRANSACTIONS

More than 50 filter criteria are available, e.g. PLUs, operators, GCs, media or modifiers. Furthermore you can select defined receipt types like invoice or void receipts. Details are displayed for these, i.e. all PLUs sold with this receipt, the unit prices, the media, the tax rate, the operator and the GC receipts belonging to the receipt are indicated.

CONSOLIDATED PLU LIST

Provides a quick overview of which PLUs have been sold and how often over a given period. It is also possible to summarize the display into departments.

TRANSACTION ANALYSIS

Suspicious invoices and receipts are filtered out. This serves for detecting transactions where waiters invoice drinks or food repeatedly - thus lining their own pockets. Receipts with immediate corrections are another example for dubious transactions. These can also be displayed in detail.

BRIEF & CONCISE OVERVIEW

- ▶ Display of sales statistics, operator report, modifiers, media etc.
- ▶ Consolidated PLU list
- ▶ More than 50 filter criteria
- ▶ Traffic light function
- ▶ Data analysis for dubious transactions
- ▶ Record of activities
- ▶ Manual or automatic data import
- ▶ Data export to other applications
- ▶ For PCs with OS Windows 7 or higher
