Vectron Systems

POS SteelTouch II

Top Technology for Professionals

Elegant and indestructible: Thanks to its extremely robust all-metal housing and the water-tight stainless-steel display frame, the Vectron POS SteelTouch II offers long-term, reliable operation even under the toughest conditions. Especially during busy periods, it proves the high performance of its electronics with its high processing speed. The proven Vectron POS system software is already equipped with a large number of special functions by default and meets individual requirements with its flexibility. The large touchscreen offers plenty of space for a clear, intuitive design of the user interface.

- Sophisticated, extremely robust metal housing
- Dust- and water-resistant display frame made from brushed stainless steel
- Available in two sizes: with luminous 38.1 cm (15") or 43.2 cm (17") TFT touch screen
- High-performance, ultra-rapid processor and large storage capacity
- Maximum number of interfaces for the connection of numerous peripherals
- Simple data backup via USB stick
- Maximum system stability thanks to lack of fans and moving parts
- Protection against viruses and manipulations
- Adjustable software with flexible graphic user interface
- Simple network installation
- Compatible with all Vectron POS systems
- Extensive back office connection options

Vectron Systems

POS SteelTouch II

Sophisticated metal housing

The elegant 100% metal housing is extremely robust, and is equipped with a water- and dust-resistant stainless steel display front (IP55). As a result, the Vectron POS SteelTouch II also functions reliably in stressful working environments, and is extremely durable. One of its standard features is a black aluminium stand, but it can also be hung on the wall to save space in accordance with customer requirements.

TFT touch screen in two sizes

The Vectron POS SteelTouch II is optionally available with a 38.1 cm (15") touch screen (1024 x 768 resolution) or with a 43.2 cm (17") touch screen (1280 x 1024 resolution).

State-of-the-art electronics

Equipped with the latest electronics, the Vectron POS SteelTouch II offers, for example, about ten times the processing speed of its predecessor model and an enormous memory capacity.

Numerous interfaces

The Vectron POS SteelTouch II leaves absolutely nothing to be desired as far as interfaces are concerned: six serial interfaces, eight external USB interfaces and an audio interface enable the connection of numerous peripherals, including printers, scanners, card terminals, vending machines, additional keyboards, etc. Two connections for up to four cash drawers and an SD card slot complete the line-up.

Flexible, high-performance POS software

The Vectron POS SteelTouch II can be operated easily and intuitively. Its software can be configured flexibly to meet individual operating requirements. Display fields and buttons can be freely positioned and organised. Alternating display pages show only those input options related to the operational stage in question.

Simple network installation

All Vectron POS systems use the same software and can be networked as required. This is naturally ideal for the simultaneous use of mobile and stationary devices, as well as for future network expansion.

Simple data backup via USB stick

The Vectron POS SteelTouch II saves all POS data reliably and conveniently on a standard USB stick at regular intervals, allowing it to be retrieved in a flash in an emergency.

Practical accessories

The Vectron POS SteelTouch II is equipped with a selection of practical, optional accessories, including a stainless steel customer display with 2 x 20 characters, a magnetic card reader, a stainless steel stand and numerous useful peripherals.

Extensive options for back office connections

The optional communications software Vectron Commander allows the POS SteelTouch II to be controlled from your company headquarters. New items or prices can subsequently be sent to the POS system, which can also read out sales, order or working time data, around the world if necessary. The Commander also facilitates connections with merchandise management and CRM programmes, working time administration and special back and front office software.

Efficient remote maintenance and troubleshooting via RDT

The remote maintenance and troubleshooting options ensure that operating errors are recognised rapidly, while problems can be analysed and usually solved directly. On-site service call-outs are thus reduced to a minimum.
